

Labels Printing

- Manufacture a variety of printed labels.
- Customer automatically signals the RYECO system to make a black defect mark approximately 10mm wide by 40 mm long on defective labels. Speeds vary up to 100 mpm.

- The customer's system is a 2411-3c 1-color Defect Lane Marking system with one Marking Head. The system can make either long defect marks, or spots as small as 10mm in diameter.
- RYECO recently shipped the customer two more systems similar to this one for adjacent machines. The new systems each have 5 Marker Heads interfaced to one RYECO control unit and independent defect spots are marked in 5 independent print lanes.
